To Whom It May Concern,

Hi-Way Safety Systems, Inc has been contracted by the City of Cambridge, Traffic, Parking and Transportation Department for over the past five years to paint and apply thermoplastic onto the roadways of Cambridge. The city has over 1900 crosswalks, 70000 linear feet of long line and hundreds of stencils. Each season the city maintains 70%-80% of all markings within a 6-month period.

I have been working closely with Hi-Way Safety Systems, Inc. for over the past five years and found their work satisfactory to the needs of Cambridge. City inspectors and myself have supervised all pavement marking applications performed by Hi-Way Safety Systems, Inc. and can verify that they follow all manufacture application procedures while operating a safe work zone. Crew foremen are knowledgeable regarding application of material and standard pavement marking layout from drawings or verbal direction.

Outside of the typical routine maintenance performed yearly, Hi-Way Safety Systems, Inc. has also applied thermoplastic onto newly paved/redesigned roadways, which received praised from staff, residents, City Council Members and the City Managers Office.

The office staff is very flexible with scheduling and will work within your needs and timetable. I would recommend Hi-Way Safety System, Inc. for all types for pavement marking applications.

Sincerely,

  
Wayne S. Amaral  
Traffic Operations Manager
